

Downloading and Installing LogMeIn Host Software

Install LogMeIn host software on your computer. Installation is a simple process aided by Wizards.

Follow this procedure:

1. Go to <http://computernexus1.com/remote.html>
2. On the Remote Support page, click the **Download** link.
3. Follow all on-screen instructions.

Important: If asked to create a **Computer Access Code** during the installation process, be sure to remember the code! We will need it to connect to your computer. The Computer Access Code **cannot be retrieved**, but it can be changed directly on your computer.
